BALDIE'S BURBLE

Well, here we are (late) again. Happy New Year to one and all, and I hope that your Christmas was enjoyable. Mine was spent largely asleep!

For various reasons, not least of which is the current blizzard of snow which, for some curious reason, has avoided Oxford so far, it may be necessary for me to publish two issues of IT at the same time. If the threatened further falls of snow manage to stop me making the trip to the printer, I will have to publish January's and February's issues at the same time - i.e., in February.

Lots of things to chat about, so let's get on. GORDON PITT is in the process of finalising details of the next Bloxwich Workshop. The date will lie around the end of March, beginning of April, and it will be held at the Sneyd Community School as before. As I wrote in the last IT Editorial, there will also be Tutorials on TI-Writer/Funnelwriter and Multiplan.

If you are interested in attending, PLEASE do contact Gordon promptly. The cost of attendance is just £1.50 per person if you book now, or £3 per person if you pay at the door. Let Gordon know if you are likely to want refreshments during the day so that he can lay on catering, and if you feel up to demonstrating anything talk to him about space and other requirements.

Ring Gordon on 0922 476373 as soon as you can - don't leave it to the last minute.

JAMES STRINGFELLOW has kindly agreed to publication of his Window software in this issue, and I am presenting all of the material he sent to me — including the object code file for checking against the result of the assembly of the source file — for those with the capacity to do so, that is. Mere mortals with just 32K and Extended BASIC are not left out however, and there is a special version of the demonstration program at the end of the presentation.

CLIVE SCALLY of TI-EXCHANGE rang me to let me know that his group will cease to exist by MAY of this year. After the publication of the remaining two issues of his newsletter, TI*MES, he will be handing over to a new national TI User group which he has proposed. He tells me that the intention is to have elections for offices on the committee, and is asking for nominations. The hope is that group officers who attend committee meetings will have their expenses defrayed out of funds, and I gather that a likely venue for such meetings will be in the West Midlands area.

I have too much on my plate already for me to stand for any post, but I am happy to act in support in any way that I can. Contact Clive for

I am almost happy to announce that ITUG and associated activities have been registered under the new Data Protection Act, although there is a possibility that further investigations may be necessary — the form giving the registration mentions that a number of registered entries may have to be re-registered. This is largely because the Registrar's staff don't really know what they're doing, I strongly suspect!

The Act is beginning to come under a little small arms fire, in that it has not been properly thought out, and I must admit that under its present structure I can see some gi-normous holes which will not be easy to plug.

For instance, we are coming to the period when Joe Bloggs on the street can officially ask a registered company if they have any data about him on file. Originally there was a suggested £5 fee which was to be paid to the company by Joe for the effort involved in responding to his request; now the figure of £50 is being bandied about — much to my disgust as it is totally unjustified. £5 would have been more than adequate — if a company is so badly set up that it cannot find entries of a particular type in its files, how on earth does it do its accounting?

What is more, and this is one I haven't seen bandied about, if Joe asks company X for details of any files referring to him (and he has to be very specific in his request), and the answer is NO, this does not mean that company will NEVER have any files referring to him — which means that he must continually make the same request of the same company in order to be satisfied. This is going to cost Joe a pretty penny, and he will still not be protected. Why? Well, firstly the Act doesn't confer the right for an individual to have an incorrect entry erased or corrected. Secondly, and most importantly, the Act ONLY refers to data which is processed electronically (which could include anything stored on a Psion Organiser, for example). There is already evidence that some companies are reverting to PAPER-based filing systems which are not covered by the Act.

It is a real farce, and it is only going to get worse. Some companies haven't bothered registering on the grounds that either it's too much like hard work, or the Act doesn't in their view apply to them. Other companies have registered under every category available on the grounds that at some stage in the future they MAY hold files under any or all of the categories — and you are required to look ahead and register in this manner — which has led to the Registrar disallowing entries of that type!

The registration period is for only three years, so in three years time I and many others will have to go through an eight month rigmarole all over again. Data Protection is necessary, but when it is implemented in this half-cocked fashion is does more harm than good.

JAMES STRINGFELLOW (see earlier) offered a tip for Multiplan Users: he was dissatisfied with the colours in Multiplan, and after trying without

success to change them, he found that when you are on the first screen - INSTALL PROGRAM DISK PRESS ENTER TO LOAD - by pressing the space bar twice gives access to 11 colour choices.

This is apparently not indicated in the Multiplan manual and might be of interest to Multiplan buffs.

DAVE HEWITT has asked me to notify ITUGers of a temporary address at which he can $t \ge$ contacted until he moves: care of 311 London Road, Headington, OXFORD, OX3 9EJ.

I urgently need two more buyers for the New Horizons RAMDISK board to make up the block order of five. If I can at least get one more, then I can go ahead and make the order. The other potential buyers who have already put their names and money down are still waiting, and I would not like to keep them waiting for ever. The price for the board alone (with disks and manual, obviously) is £50. Let me know as soon as you can so that the wheels can be set in motion.

I am trying to put together a comprehensive list of my Public Domain holdings, but I am very busy at the moment and other things have a higher priority. I will get round to it just as soon as I can.

While I was away, apparently a number of ITUGers tried to ring me (tsk, tsk, not reading my Burble for the last issue...), as a result of which BT decided that I had a fault on my line. It used to be standard BT advice to take your phone off the hook if you were away from your house for any length of time, so that the phone would not ring in an empty house and alert potential burglars.

However, when I did it, my awkward phone (a Slimtel) put a fault tone on the line, which confused everyone. Now it turns out that there really IS a fault on the line somewhere...

I have an increasing backlog of articles, some of which were submitted a few months back, so my public apologies to the authors, and I will try to get them out as soon as I can. Almost all submitted material has to be modified to fit the IT format, as well as being proofed and often spaced out a little to make it more readable once it has been reduced. This all takes time, and that's one commodity which is in great demand at present.

The new subscription rate for ITUG is now confirmed at £11 for UK, £12 for all overseas subscriptions. I have managed to keep the increase to a bare minimum, which also means that IT will be sent via surface mail under PRINTED PAPERS REDUCED RATE for all overseas subscribers — the

cost would be extortionate otherwise.

The new rates will apply from JUNE 1st 1987.

Because my costs have increased, I am unable to support any more "exchange" subscriptions with overseas User groups. After ITUG's details were (incorrectly) published recently, I received a spate of newsletters from other groups asking for a newsletter exchange. However many of the newsletters were just that — two or three pages of A4 with local information, and while I would be happy to subscribe to the more informative groups overseas (it would cost far more to send them IT each month than for me to subscribe direct!) I cannot afford to make any more exchanges, at least until ITUG has another 25 subscribers to make it possible.

The light pen project is still in the doldrums: the engineer has made final hardware modifications, and we now await the change to be checked and incorporated into the software. This is the sticking point, as the software author has recently taken on a house and a wife I believe, both of which are curtailing his activities. Watch this space...

Last year's Bloxwich Workshop still hasn't found a writer to present a brief piece about it - perhaps we were all too involved to step back and look around - and the only photos that I know of are currently in the States. I now have the capability of printing photographs, in grey of course, from colour or black & white originals, and I hope to publish a shot or two in the future. Meanwhile I will republish the pictures sent to me by MIKE HEUSER and (poorly) reproduced in the October IT last year.

The MYARC GENEVE is now in production and the first 50 units have been shipped, I understand. I also understand that the name GENEVE is being dropped in the face of threatened legal action from HEWLETT PACKARD. Yes, once upon a time HP produced a product called GENEVA, and although it isn't in production any more, HP see dollar signs flashing so they are jumping up and down. Another company with a big mouth and a small brain, do you think? Ask any potential 9640 (Geneve) owner if he thinks there will be any confusion and you'll get a fairly straight answer...

Did you like the headers for Adventure Help and TI-Writer articles in December's IT? They're both a font called <u>ALGERIA</u>, which is available on a Public Domain RLE disk. Although it is intended for use with TI ARTIST, I have examined the file format and found that it can be used in TI BASIC to tart up title pieces. I will (hopefully) present the details next issue, and while I remember: the current versions of the file are faulty - certain characters have been improperly defined, and the file format has not been properly adhered to, with the result that TI ARTIST won't respond correctly if ALGERIA is selected.

I have re-arranged the ALGERIA_F file so that it should now work correctly, but I cannot make up for the incorrect definitions yet. I hope to publish the re-arranged file next issue when I discuss the file format.

RALPH FOWLER of TIBBS fame has finally sent through the recopied third disk — apparently he experienced unavoidable delay. The disk and its packaging sustained a deliberate attempt at damage however: both the disk box and the disk itself had been deliberately folded in half so that the disk box (made of stiff cardboard and of a standard design) had actually snapped and the disk had a permanent crease introduced into it.

As the outer jiffy bag didn't bear any such marks, I assume that the damage was inflicted on the outward journey - i.e., from me to Ralph - which once again suggests strongly that there is a particularly malevolent individual working for the Post Office. Readers of this Burble may recall earlier issues when I bemoaned the fact that some nasty so-and-so had been interfering with my post; it looks as though they are back on the job again. What can you do when faced with such a mentality?

Talking of post, a couple of letters sent to me during the Christmas period were sent to my old address - vacated almost two years ago!

Please make sure that you have an up-to-date address on your files!

No-one came back to me about JIM PETERSON's little puzzle from last issue, so I assume that either no-one gave a damn or that every one sussed it out straight away. Ahem.

The instinctive reaction is to assume that the use of DISPLAY AT means an instruction in Extended BASIC. However, TI BASIC contains the command DISPLAY which is the same as PRINT, although you hardly ever see it used.

In TI BASIC, therefore, DISPLAY AT(1,1) means PRINT AT(1,1), and as we don't have PRINT AT at all, AT(1,1) is taken as an array. As it has not previously been assigned a value, the 4A initialises it at zero, so the content of element (1,1) of array AT() is 0. The line thus tells the 4A to print 0, followed by 0 again on the next line (which is what :0 produces), hence the double zero effect.

Well. I thought it was good...

After the last issue, one brave soul said that they wouldn't mind paying £15 for a regular 40 page IT, while another gave me a suggestion for the content of future articles. Unfortunately, the suggestion was still far too vague, so that leaves me back where I started... Boo, hoo, hoo...

MULTIPLAN MANIA

By Brenda J. Noell

Chapter 2: Building a Worksheet

Another firm is considering purchasing SPENCER CERAMICS and wants a projected income statement; the firm wants a summary of the operating budget, including projected sales, costs, and gross profits.

The Row and Column numbers are only on the electronic worksheet and do not appear on the printed copy.

THE ALPHA (A) COMMAND-begin by entering headings for the rows and columns. We'll add the titles later.

Numbers are automatically recognized as soon as they are typed but, if you want to add a title or text you use the Alpha Command. With the cell pointer at R3C1, PRESS A. Type in SALES. PRESS ENTER. To correct an error FNCT 9 to backspace. Another way to enter the word Sales is to press the DOWN key and Sales will appear at R3C1, the cell pointer is now at R4C1. The Up, Left and Right keys will also work.

The digits 0-9, =(equals), +(plus), -(minus), .(period), ((left parenthesis), or "(quotation mark), will put you in Value command. All the rest are Alpha command. Enter Cost at R5C1 and Gross Pr in cell R8C1. It should look like this:

```
#1 1 2 2 3 Sales 4 5 Cost 6 7 8 Gross Pr
```

Look at R8C1. The column is not wide enough to fit Profits in. To add more characters to the column Press F (Format). Press W (Width). Multiplan shows d (for default), type in 15 characters to give yourself enough room. Since you only want to widen column 1 press ENTER.

Widen the remaining columns to 10 characters by: Press F, Press D, Press W, type 10, Press ENTER.

ENTERING NUMBERS-go to R3C2. Type 2000 (Use only numbers from the top of the keyboard, don't use commas, spaces or \$). Press DOWN until you get to R5C2 and Type in 15000, Press ENTER.

ALIGNMENT-means placing the numbers and text into a cell: flush with the left edge, right edge, centred or mixed (called General).

Press F. Choose Default. Select Cells (Press ENTER or C). Choose GEN.

•

SETTINGS	EXAMPLES	EFFECT
Centre	Sales \$1000.25 \$50.25	text and numbers centred
General	Sales \$1000.25 \$50.25	
Left	Sales \$1000.25 \$50.25	text and numbers flush left
Right	Sales \$1000.25 \$50.25	text and numbers flush right

Any alignment choice that sets the numbers to the right would be all right since it would line the decimal points up. So choose Gen or Right. This will affect all cells.

FORMATS-right now you want a \$. Here is a brief summary of formats that are more thoroughly explained in Part 2.

SETTINGS	MEANINGS -	EXAMPLES
Cont	Continuous	Spencer Ce IramicsI
Exp	Scientific	1.4301E-23
		4.67E5
Fix	Fixed Point	4.513
Gen	General	text and numbers shown in standard format
Int	Integer	3.1416 shown as 3
\$	Dollars	\$20000.00
		(\$150.00)
*	Bar Graph	3 shown as ***
*	Percent	.0513 shown as 5.13%
_	(Do not change	format)

While in Format command, Press TAB (CTRL A), choose \$ (this automatically gives you two decimal places). Press ENTER.

TRANSFER-Type T. Press S (Save). Remove the Multiplan diskette and install the storage disk. Name this file SPENCER. Type the name in, Press ENTER. Notice the TEMP and the bottom of the file is replaced with SPENCER.

Press Q (QUIT), then Y.

Chapter 3 will deal with "Entering Formulas".

By JO ANN COPELAND

SPECIAL CHARACTER MODE

A book could be written on this subject - and naturally IT can't do that all at once. So how about covering this a little bit at a time? All against say 'Nay' and all for it say 'Aye'. Okay, the Nays have it! Well, the majority rules! - but here we go anyway!!

Special Character Mode, otherwise known as CTRL U, can be used several ways for several reasons. It allows ASCII character codes 0-31 (Hex 0-1F) to be used in Text in order to send escape sequences or special commands to the printer. If you press CTRL U you will see a new and different cursor — it should look like an underscore character and should be blinking. To get out of Special Character Mode, Just press CTRL U again! I will be listing a "Guick Reference" sheet for special characters displayed on the screen in this mode, with an explanation on the codes, even if I don't understand them myself!

To be covered later are two notes: you can utilize Special Character Mode in two ways. When one character is to be used you just enter the character into the document from Special Character Mode. If you have a combination of two or more code characters to be used then you can use the Transliteration command. Have I covered that? Examples will follow so no one (including myself) will get lost!

To start with, let's list out the codes for the CTRL U mode:

ASCII		FUNCTION	PRESS
CODE	ACRONYM		KEY
0	NUL	Null	SHIFT 2
1	SOH	Start heading	SHIFT A
2	STX	Start text	SHIFT B
3	ETX	End text	SHIFT C
4	EOT	End transmission	SHIFT D
5	ENQ	Enqui ry	SHIFT E
6	ACK	Acknowledge	SHIFT F
7	BEL	Bell	SHIFT G
8	88	Backspace	SHIFT H
9	HT	Horizontal tab	SHIFT I
10	LF	Line feed	SHIFT J
11	VT	Vertical tab	SHIFT K
12	FF	Form feed	SHIFT L
13	CR	Carriage return	SHIFT M
14	SO	Shift out	SHIFT N
15	SI	Shift in	SHIFT O
16	DLE	Data link escape	SHIFT P
>>>>>	>>>>>>	*********	>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>

MORE)

17	DC1	Device Control 1	SHIFT Q
18	DC2	Device Control 2	SHIFT R
19	DC3	Device Control 3	SHIFT S
20	DC4	Device Control 4	SHIFT T
21	NAK	Negative acknowledge	SHIFT U
22	SYN	Synchronous idle	SHIFT V
23	ETB	End transmission block	SHIFT W
24	CAN	Cancel	SHIFT X
25	EM	End medium	SHIFT Y
26	SUB	Substitute	SHIFT Z
27	ESC	Escape	FCTN R
28	FS	File separator	FCTN Z
29	GS	Group separator	FCTN T
30	RS	Record separator	SHIFT 6
31	us	Unit separator	FCTN U

To help understand these, we'll go through a couple of the commands - please note that most of these are in conjunction with the Star Micronics Gemini 10X printer ('cause that's what I have and I am using the printer manual along with the TI Writer Manual - Sorry!) Most commands, though, should work equally with other printers, if not perhaps in their own way. (Huh?)

ASCII Code O (Nul) Shift 2: Null - This command is used to terminate programmed tab settings (for example: ESC-D and ESC-P). ESC-D clears current tab settings and sets new tabs. ESC-P sets vertical tab positions.

ASCII Code 7 (BEL) Shift G: Bell - This command causes the buzzer to sound for 1/4 second when this code is input. To make this effective input ESC Y1 and to 'turn bell off' input ESC Y0.

ASCII Code 8 (BS) Shift H: Back Space - This command causes the printer to shift the starting printing position to the left by one space (backspaces 1 space before printing).

ASCII Code 9 (HT) Shift I: Horizontal Tab - This command causes the printer to move the print head to the next tab set position.

ASCII Code 10 (LF) Shift J: Line Feed - Causes one line of paper feed to be accomplished after data is printed.

ASCII Code 11 (VT) Shift K: Vertical Tab - This command causes paper to be fed to the next vertical tab position.

ASCII Code 12 (FF) Shift L: Form Feed - Paper is fed to the print start line on the next page by a preset program after data is printed.

ASCII Code 13 (CR) Shift M: Carriage Return - This command causes a printout and if your Dip Switch is set appropriately one line is fed automatically.

ASCII Code 14 (SD) Shift N: Shift Out - This turns on double-width character print mode.

ASCII Code 15 (SI) Shift O: Shift In - This command turns on the compressed mode.

ASCII Code 18 (DC2) Shift R: Device Control 2 - Cancels SI-Mode (which was compressed print).

ASCII Code 19 (DC3) Shift S: Device Control 3 - This command causes the printer to be deselected (opposite to DC1).

ASCII Code 20 (DC4) Shift T: Device Control 4 - Cancels SO-Mode (which was double-width printing mode).

ASCII Code 30 (RS) Shift 6: Record Separator - This command code ends any macro instruction.

ASCII Code 27 (ESC) FCTN R: Escape - This code is used for expansion control codes.

These all look strange and sound even worse, but if you have a 'test' TI Writer/Funlwriter file you may want to play with these commands. Let's see if we can do something with them now.... (besides the obvious one of chucking them in the bin!).....

Example:

At the beginning of your test file, insert a new line (FCTN 8) and having the cursor at the very beginning of the line go into special command mode (CTRL U). Hit the keys Shift G (Bell). Exit special character mode (CTRL U) hit enter and go down a few lines, maybe somewhere in the middle of a paragraph. Insert 2 lines and go to the very beginning of the line (CTRL V helps). Go into special character mode (CTRL U) and hold down the Shift G (Bell) keys, enter, hold the Shift D keys (Shift In - compressed mode). Exit special character mode and hit enter.

Now, if you save this test file and go to the Formatter the following should happen: After hitting the appropriate keys to start the Formatter, your printout should occur with (1) a 1/4 bell tone, (2) some printing, (3) another 1/4 bell tone, and (4) the rest of printing in compressed mode.

Most people use the bell to ring a tone when they want to be alerted to a particular area in typing, or to notify them when their paper is coming to an end (say perhaps 10 lines before paper runs out, etc.). Sometimes you can just use it for fun!

You may have noticed when playing with CTRL U special character mode that if you hit some 'normal' keys (A, B, C, D, etc.) you get strange looking characters on the screen. These are the screen displays of the special characters and not a Twilight Zone entrance. Although I feel that way every time I go into special character mode!

If you happen to check out James Stringfellow's article in IT (March) you'll notice you can also do some fancy artwork with CTRL U (depending on your printer, etc.). I haven't had the opportunity to get into this yet as I still use Transliteration to accomplish most of my 'artwork' (if it can be called that). However, this will be discussed at a later date (what's new?) after we have recovered from today's work! If we ever do recover! Don't feel like a failure if you don't get into this right away - the best of us take our time and repeated failures shows us where our fault lies (in my case - pure ignorance!)

So have a go with some of these, and we'll see you next time!

R S 2 3 2 C A R D T O P R I N T E R

By PHIL WINGROVE

I have seen many cases of printer cables being wired up incorrectly, serial and parallel.

The following shows how to connect your cables.

First the parallel cable:

The pin connections are:-

RS232 CARD (16 PIN CONNECTOR) PRINTER (36 PIN)					
PLUG	PLUG T&B ANSLEY 609-1630 CENTRONICS PLUG 57-30360 AMPHENOL				_
PIN #	IDESCRIPTION	ICONNECT TO IP	IN#	IDESCRIPTION	1

20		DTR	1 20

JAMES STRINGFELLOW

...does it again!

Once again I have pleasure in publishing material from our Yorkshireman in Paris James Stringfellow. If you look back at previous issues, you will see that James has been beavering away at a wide spectrum of projects, and this issue shows his work with "Windows".

Designing it so that anyone with 32K and Extended BASIC (and possibly using other configurations for all I know) can utilise this useful facility, James has arranged to submit not just the utility and a demonstration program to illustrate its use, and not just the source code so that those with either the Funnelwriter's, or TI's own, Editor/Assembler can assemble the object code, but he has also provided a version of the program which "pokes" in, byte by tyte, the same utility so that if ALL you have is a console, 32K, and Extended BASIC (not forgetting the cassette leads!) you are not left out in the cold (which at the time of writing is currently well below freezing...).

On the following pages you will find first the OBJECT CODE file (to check that your assembly of the SOURCE CODE (given later) has been correct) printed below, followed on successive pages by the DEMONSTRATION PROGRAM, the SOURCE CODE which needs to be assembled into an OBJECT CODE file called STRINGO, and then, for those readers without a disk system, the "poke-it-in-byte-by-byte" version of the demonstration program.

I have run the demonstration programs to ensure that all is well, so the versions you see here were up and running OK on my system. If you do experience problems, suspect first an "operator error", and if you are convinced there is none, contact me at Oxford. Good luck, and have fun!

ADVENTURE HELP

Adventure Help Line By JO ANN COPELAND

This particular Adventurer has reached 275 points out of 400 in Starcross and is STUCK! Rumour has it I may order a hint book but don't you believe it! Would a true Adventurer do anything like that? (We'll see if I don't get any further within the next week!) Just in case, anyone out there have one for sale....?

Cut Throats

Cut Throats (Aptly named) - Visit Hardscrabble Island and see how many times it happens to you! "The tourist folks come here in June with a clean shirt and a ten-dollar bill...and they don't change either one the whole summer."

Many people who played this Adventure got nowhere - simply by not winding (setting) their watch! How else can you tell what time it is? And in this game you can set your watch by what happens!

Hints for the Sao Vera

Optional items are flashlight and shark canister among other optional expenditures (depending on how much to have to spend): net, spear gun, small air compressor (if you like to breath).

The bunks and bars will go hand in hand - Feel like fooling around with a skeleton? - the entrance to this ship and the exit lie in the same spot - to decide which chest is best (oak or maple?) try using a piece of equipment from Outfitter's International - feel like a walk on the ocean floor? There's an exit provided for you to do so.

Hints for the Leviathan

Optional items are (among others) flashlight, compressor, shark canister, putty, electromagnet, drill.

Getting off Hardscrabble Island is, in itself, a chore! Don't leave without the right items from Outfitter's International, and don't forget the envelope that's on McGinty's desk! Good luck!

Enchanter

Spells needed to complete Adventure:
Melbor, Gondar, Cleesh, Zifmia, Krebf, Ozmoo, Exex, Vaxum,
Rezrov, Gnusto, Blorb, Nitfol, Frotz, Kulcad, Filfre, Guncho, Izyuk.
Just for kicks: Zifmia Implementers

Places of interest (to do things or find things): Inside shack, Shady brook, hovel, outside gate, jewel room, bedroom, Hall of Mirrors 1, closet, gallery, cell, secret passage, library (2), north gate, forest, swamp, map room (2), guarded door, engine room, beach, control room, winding stair.

Witness

This Adventure gives you several opportunities to prove yourself an idiot — instead of immediately going to the front door for entrance, try going to the back door and hanging around to see what you can see — you'll find some interesting things out, but later won't be given admission to the house 'cause you're too late for your appointment!

Times to be somewhere: 10:59 Monica returns to the garage (if you're hiding in the right spot you can see some interesting stuff). 11:33 The Coroner comes. 11:47 Phong's room. 12:05 Mr. Linder's (Ex-Mr. Linder's) office (the lounge).

Places to be and things to see: Entry; Butler's room and window; Garage; Side yard; Work shop; Office (desk, lounge); Monica's bedroom; Bathroom Tub window; Freeman's bedroom window.

Things you can find (among others) and helpful words: putty, gun receipt, note, mystery book, cast, powder, telegram, handcuffs, snubnosed colt, match book, ticket stub, medical report, side-yard cast, back-yard cast, muddy handgun, hidden handgun, clock key. (Words): Dust, examine, analyze, compare, accuse, arrest, call, cuff. Show (item) to (someone). Compare (something) to (something).

This Adventure has THREE solutions to it - only ONE is the COMPLETE solution and you will see the statement "You have reached a complete solution to the story. If you like, you may see the author's summary of the case."

Planetfall

80 points to score in this one - 3 days in an Adventure (according to Current Galactic Standard Time (adjusted to your local day-cycle)). Become a GALACTIC OVERLORD by completing this the right way!

"Wixin xe last filv senshureez, xe rilz uv xe Nuu Teknakrasee haz reeturnd sivilizaashun tuu xe levul ataand beefor xe Hilaatus."

Points	Reason
3	entering escape pod
3	entering the Crag
2	turning Floyd on for the first time
2	firing the Laser for the first time
4	entering Storage West
4	entering Admin Corridor North
4	entering the Kitchen
4	entering the Tower Core
· 4	entering the Kalamontee Platform
4	entering the Lawanda Platform
· 1	taking the Kitchen Access Card
1	taking the Shuttle Access Card
1	taking the Upper Elevator Access Card
i	taking the Lower Elevator Access Card
1	taking the Miniaturization Access Card
2	causing Floyd's 'death'
6	fixing the communications system
6	fixing the planetary defence system
6	fixing the course control system
4	entering the Strip Near Station
4	entering the Auxiliary Booth
8	fixing the computer
5	entering the Cryo-Elevator

Accomplish this correctly and you will have your just revenge — get Blather demoted to Ensign Twelfth Class and have him assigned as your personal toilet attendant!

REVIEWS

By JO ANN COPELAND

SID MICHEL's The Big Texas Spy Adventure offers you the opportunity of tracking down the evil 'SAXET'. Easier said than done! Sid has done a great job of improving this latest release and it has many advantageous points. You can save your files (in case you think you're going to get killed - which you will) to Disk 1 or Disk 2 and can save under different filenames. There are a total of 158 locations which must have taken Sid a lot of time and effort coordinating! There are several modes of transport, including a submarine, an amphibious vehicle, a tigermoth airplane, etc. He supplies his own choice of Help clues, which can be run at your own convenience. I originally thought this was great - however, I still haven't completed the Adventure (shame of all shame). There is also a list of helpful words which you will find yourself looking at more than once. The screen colours are good and there are many 'stick-points' and a clever use of the objects in the Adventure. What you see is not always what you think!

I'd definitely encourage TI'ers to get their teeth into this one — just make sure you have plenty of mapping paper and a pencil sharpener!

Other Adventures to check out:

Lost Treasure of the Aztec (and/or) Jack and the Beanstalk

Formatted listing produced partly by a program kindly supplied by JIM PETERSON of TIGERCUB SOFTWARE.

S 0 U N D S G 0 0 D

The next couple of pages are taken up with three machine language programs published by RICK KELLOGG in the December '86 issue of CIN-DAY NEWS, the newsletter of the CIN-DAY USER GROUP. The programs form part of a suite written originally by BILL GRONOS and published in the R/D COMPUTING NEWSLETTER produced by RYTE DATA of Box 210, Mountain Street, Halibirton, ONTARIO KOM 1SO, Canada. Rick didn't publish the text that goes with these programs (which must be assembled obviously before they can be run), but suggests that the full story should be obtained by taking out a subscription to R/D COMPUTING NEWSLETTER (given as \$17 for overseas - that's in US\$, which will need converting and even then may not be enough).

A few details are available: the sound is supplied via your cassette player hooked up to the port using just the 'ear' lead. One program is a primitive 'sound analyser' and is supposed to produce a wave form on the screen similar to that produced by an oscilloscope. Another is a 'spectrum analyser', representing any sounds on a graduated bar chart. The third program is a 'light show' and should take any music played to the computer and turn it into a psychedelic experience (a bit like looking at the pictures in 'TODAY'...?).

These are untried and untested, so I cannot vouch for them at all. I would welcome some feedback from successful implementers!

BULLETIN BOARD

WANTED / 4 SALE / WANTED / 4 SALE / WANTED / 4 SALE / WANTED / 4 SALE /

I have managed to scrounge another DOUBLE-SIDED FULL HEIGHT DISK DRIVE. It is without power supply or case, (which can be supplied at extra cost) but would fit into the PEB. Necessary cables can be supplied if required. It can be used as double-sided by the TI disk controller, and as double-density as well by other controllers with that capability.

The price is £100 including delivery by Datapost, and guaranteed for a year. Contact me on Oxford 510822.

JOHN RICE has a whole stack of goodies for sale - I could have listed it all here, but it does run to seven pages! Send John a large stamped, self-addressed envelope to 7 Lincoln Road, SWINTON, Manchester M27 3WR.

STEPHEN SHAW has some goodies on offer:

*Modules without documentation:

PAC MAN	Atarisoft	£3.00
BUCK ROGE	RS TI	£3.00
PERSONAL	RECORD KEEPING TI	24.00
DERSONAL	REPORT GENERATOR T	1 £3.00

TI-WRITER module only - no manual, no disk £3.00 TI-Writer disk, if required, (copy) £4.00

ZERO ZAP Milton Bradley £2.00
DISK FIXER Navarone - documentation is part of the program £4.00

*Several copies of "GETTING STARTED WITH THE TI-99/4A" by you know who. Yours for £2.00 each, autographed as required.

All the above prices include post and packing.

There is also one item for collection only: a 4A console with psu and modulator. The cable connecting the keyboard to the pcb has snapped and will need resoldering. The unit is otherwise thought to be in good order. Useful for spares or repairable if you have a soldering iron. Remember, for collection only - it is heavy, and there are no packaging materials available. £6.00

The supply is limited, so phone 061 432 6097 between 8pm and 10pm only. Phoned orders will be held for three days only. Alternatively, write to Stephen Shaw, 10 Alstone Road, STOCKPORT, Cheshire SK4 5AH.

ALAN DAVEY has a system for sale at \$400 or nearest offer. The system comprises a console, PEB, 32K card, RS232 card, disk controller card, internal single-sided drive, and at least the Editor/Assembler module with possibly a TE2 module as well.

He is also on the lookout for a standalone 32K, and a standalone disk drive controller at reasonable orices.

Phone him at home on 04606 4511, but remember not to ring on Sunday he runs his 4/ABC Bulletin Board on that day, which ties up the phone!

LETTERS

I received a number of letters asking about memory expansion, and I will respond to those in due course. Full details were published in earlier issues of IT concerning the "Matchbox" RAM Expansion for those who have the relevant issues.

Meanwhile, DAVE HEWITT has a request for someone conversant with C99: Can anyone provide a function in either C or Assembly to show a disk directory, and can anyone provide a function to perform the equivalent of Extended BASIC's CALL CHARPAT() which is not included in the GRF1 library.

Anyone able to help should write to Dave at the address given in this month's Burble.

Finally, I have been sent a short list of Bulletin Boards in the Dallas area by BOB LUCKIN (thanks, Bob). Bob has no idea what they're like, and knowing the exhorbitant cost of using BT to phone anywhere, I guess that few other UK Users are likely to find out, but here they are just the same. The Dallas area code of 214 should be inserted after the international code for the USA, but before the codes given below:

99ER CONNECTION 272 2786. A 300 baud TE2 transfers only; fee

required for complete access to messages and

downloads.

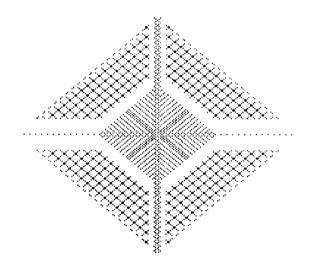

LONGHORN TIBBS A 300/1200 baud, brand new TIBBS in

Dallas, providing new messages and several new

downloads.

321 4238. 300/1200 baud, with Xmodem and TE2 THE FLUG TIBBS

transfers.

THE TIHOME SOFTWARE COLLECTION

Pricing for TSC disks has been reorganised, although the full Collection is still offered at £35 inclusive.

Check the TSC Catalogue (available free to ITUG subscribers on request) to find out what the TSC entries stand for. Make sure that you indicate clearly what your choice is, specifying the name of the disk/s you want.

GAMES:	TSC ENTRIES:	PRICING
TSC_DSK_A TSC_DSK_B TSC_DSK_C TSC_DSK_D TSC_DSK_E TSC_DSK_E TSC_DSK_F	GA0001 - GA0011 GA0012 - GA0022 GA0023 - GA0032 GA0033 - GA0043 GA0044 - GA0055, GA0056 - GA0066	The number of programs on a disk can vary between about 7 and 11, dependent upon the sizes of the programs in terms of sectors used. The exception is the DEMONSTRATION disk, which alone is offered at £2.95 inclusive of post and packing
TSC_DSK_G TSC_DSK_H	ED0001 - ED0009 ED0010 - ED0017	The rest are priced as follows:
DEMONSTRATION:	1	£ 5.95 for ANY 1 DISKS (SAVE £ 1) £ 6.90 for ANY 2 DISKS (SAVE £ 1) £ 9.85 for ANY 3 DISKS (SAVE £ 2)
TSC_DSK_I	DE0001 - DE0006	£12.80 for ANY 4 DISKS (SAVE £ 3) £14.75 for ANY 5 DISKS (SAVE £ 5)
MUSIC:		£16.70 for ANY 6 DISKS (SAVE £ 7) £18.65 for ANY 7 DISKS (SAVE £ 9)
TSC_DSK_J	MU0001 - MU0009 I MU0010 - MU0017 I	£20.60 for ANY 8 DISKS (SAVE £11) £22.55 for ANY 9 DISKS (SAVE £13)
TSC_DSK_K TSC_DSK_L	MU0018 - MU0026	£24.50 for ANY 10 DISKS (SAVE £15)
UTILITIES:		£26.45 for ANY 11 DISKS (SAVE £17) £28.40 for ANY 12 DISKS (SAVE £19) £30.35 for ANY 13 DISKS (SAVE £21)
TSC_DSK_M TSC_DSK_N TSC_DSK_O TSC_DSK_P	UT0001 - UT0011 UT0012 - UT0022 UT0023 - UT0033 UT0034 - UT0044 UT0	£32.30 for ANY 14 DISKS (SAVE £23) £34.25 for ANY 15 DISKS (SAVE £25) £35.00 ENTIRE (SAVE £27.20)

All programs are recorded on Single-sided disks.

You may elect to be supplied with software on Double-sided disks, when you should deduct £1 from the prices shown above.

If you prefer, you may send in your own disks, in which case deduct 50p for each disk from the prices shown above.

For example, 8 disks supplied by you would work out at £20.60 - $(8 \times 50p = £4) = £16.60$ nett.

All the above prices are inclusive of post and packing.

The pricing for programs recorded on cassette remains &1 per program, with an overall charge of 65p for post and packing.

PLEASE MAKE ALL CHEQUES PAYABLE TO "PETER BROOKS"
